

GREEN POTASH

POTASH DERIVED FROM MOLASSES

FOR ALL CROPS

Farmers' first choice since 1974

GREEN POTASH

POTASH DERIVED FROM MOLASSES

Potassium is one of the essential major plant nutrients required by all plants in large quantities for proper growth and better yield. Potassium is considered second only to nitrogen when it comes to nutrient requirement of plants and is commonly considered as the quality influencing nutrient. It affects the shape, size, colour, taste and other parameters of the produce

Potassium is required for many metabolic processes for the activation of a large number of enzymes that are required for chemical reactions within the plant. Potassium aids in water movement within the plant system. It also controls the opening and closing of stomata which regulates the water status within the plants. Deficiency of Potassium Leads to Poor growth and reduced yields. Plants become more susceptible to pest and disease damages.

Average soil reserves of K are generally large, but most of it is not in plant-available form. Therefore, crops need to be supplied with soluble potash. Our Green Potash is containing water soluble potash which is readily available form & additionally supplemented with Potash bacteria, play a key role in releasing unavailable K from soil & carrier, There by Green potash helps plant to provide total potash requirement for normal growth & development

Multiplex Green Potash is an excellent potash rich organic manure, which contains Min. 14.5% K_2O as per FCO specification.

DIRECTION FOR USE

Apply 40 to 50 Kg of Multiplex Green Potash per acre at the time of land preparation or before transplantation.

USAGE

- Green Potash can be Used as a basal dose at the time of crop sowing
- Preferably applied separately but can also be mixed with other fertilizers. It can be mixed with soil for application in fields/ crops.
- For individual plants about 250 to 500 grams to 1kg/ plant is recommended.

Available Packing: 25 kg & 40 kg

BENEFITS OF MULTIPLEX GREEN POTASH

- Potassium as K_2O in Green Potash is in bioavailable form & readily available for plants to uptake
- Green potash provides sufficient potassium as per plant need thereby helps in better crop growth, increasing yield, improving quality, shelf life & marketability of the produce.
- Potash derived molasses is used as a raw material for Green Potash & is totally biodegradable
- Increases the disease and pest resistance in plants
- Helps plants to resist changes in environmental stress in a better way
- Improves plant growth and makes plant healthier
