COMPLETE BALANCED NUTRIENTS FERTILIZER FOR PEPPER

MULTIPLEX PEPPER SPECIAL

Pepper is popularly known as 'King of Spices'. Pepper is a vine cultivated for its fruit which is usually dried and widely used as Spice. Pepper is exclusively and extensively grown in South India. Only few pepper growers are following the recommendations of Spices Board pertaining to fertilizer requirement. Majority of growers are not adhering to this as it is grown as a inter crop along with other crops. Because of this, quality and quantity of yield are declining year after year. Keeping this in mind, Multiplex has developed a product Multiplex Pepper Special after extensive research and field trials to improve the yield both by quality and quantity. Multiplex Pepper Special contains Nitrogen, Potash, Magnesium, Sulphur, Zinc, Boron, Molybdenum, Copper, Manganese, Iron along with plant growth promoters like ANNA and Gibberellic Acid in easily dissolvable and absorbable form and in balanced proportion.

DIRECTION FOR USE

Dissolve 2.5 gms of Multiplex Pepper Special in 1 litre of water and spray on both surfaces of the leaves so that leaves get completely wet. We recommend 2 to 3 sprays.

- 1st Spray during the onset of monsoon
- 2nd Spray at the fag end of the monsoon
- 3rd Spray 30 days after second Spray, i.e during the month of October or November.

BENEFITS OF MULTIPLEX PEPPER SPECIAL

- It supplies all Major, Secondary & Micronutrients needed by Pepper Plants at different growth stages.
- Improves Pepper yield both by quality and quantity.
- Keeps plants healthy and disease free.

Manufactured by

KARNATAKA AGRO CHEMICALS
