

MULTI MICRONUTRIENTS FERTILIZER FOR

# POTATO

**Increases the  
yield both by  
quality and quantity**

*Farmers' first choice since 1974*

# MULTIPLEX POTATO SPECIAL

MULTI MICRONUTRIENTS FERTILIZER

Multiplex Potato Special is a research product containing secondary nutrients Calcium, Magnesium, Sulphur and Micronutrients Zinc, Boron, Manganese, Iron and Molybdenum in balanced quantities and in easily available form.

Indian soils are not in condition to fulfill the complete requirement of all nutrients. Hence, the nutrients are supplied from external sources. The potential yield of potato is limited by a number of biotic and abiotic factors during the growth period. Any deficiency of a single micronutrient will affect the yield quality and quantity considerably. The application of Multiplex Potato encourages uptake of major nutrients resulting in balanced nutrition management for getting good quality tubers, high yield and increased shelf life.

## DIRECTION FOR USE

Dissolve 2.5 g of Multiplex Potato Special in one litre of water and spray on both surfaces of the leaves. First spray 35 days after germination and Second spray 20 to 25 days after the first spray.

## BENEFITS OF MULTIPLEX POTATO SPECIAL

- Helps to uptake essential nutrients
- Promotes vigorous rooting, better emergence of foliage and early tuber initiation
- Promotes early bulking in tubers through accumulation of nutrients and water
- Imparts shining to the skin of tubers
- Enhances keeping quality making it suitable for long transportation
- Enhances resistance against Pest and Diseases
- Increases the yield both by quality and quantity
