Micronutrient Fertilizer

Farmers' first choice since 1974

ALLBOR +

DI-SODIUM OCTA BORATE TETRA HYDRATE

Boron (as B) 20.00%

Micronutrient Fertilizer

Multiplex Allbor + contains 20% Boron. Boron is an important nutrient needed for all crops. It helps in better growth and stability of the plants. Boron with Nitrogen in plants ensures the good transportation of water, nutrients and organic compounds to the growing points. It increases the chlorophyll pigmentation thereby increases the rate of photosynthesis resulting in better growth and development of leaves, stem and other vegetative parts. It helps in the maturity of plants. Multiplex Allbor + regulates sugar translocation, increases sweetness of the fruits and colour. Maintains structural and functional integrity of plant cells, enhances nodulations in leguminous crops, increases pollination and good seed setting.

DIRECTION FOR USE

Dissolve 1 to 1.5 g of Multiplex Allbor+ in one litre of water and spray on both surfaces of the leaves. We recommend three sprays during critical growth and development stages of crops. First spray 15 to 20 days after transplantation/ sowing. Second spray during flower initiation and third spray during the fruit development stage.

Multiplex Allbor+ is also suitable for soil application either through direct application or through fertigation.

Packing: Multiplex Allbor + is available in 100 g, 250 g, 500 g & 1 kg packing.

BENEFITS OF MULTIPLEX ALLBOR +

- Easily soluble in water
- Increases the pigmentation and water retention capacity in leaves
- Helps in uptake of other applied nutrients
- Regulates hormones like Auxins and Indole Acetic Acid
- Increases root elongation in seedlings and plant establishment
- Increases good setting of flowers, fruits and seeds
- Eliminates boron deficiency in plants
- Increases Pollen viability
- Increases the frost resistance in fruit trees and vines
- Enhances grain filling, sugar content of fruits & increases the size of fruits
- Avoids cracking and pre mature drop of fruits and nuts
- Enhances the production of amino acids, proteins and enzymes
- Improves yield both by quality and quantity
