

CHAMAK

CONCENTRATED LIQUID CALCIUM 11%

Liquid Calcium Fertilizer

Farmers' first choice since 1974

CHAMAK +

चमक् +

Multiplex Chamak + is a Multi-Micronutrient Fertilizer product containing higher concentrations of Calcium and Boron along with other needed nutrients in easily available and absorbable form. This has been developed exclusively for foliar spray. Calcium & Boron are essential nutrients that are required by the plants for healthy growth and development apart from other nutrients. Calcium is a major constituent of cell wall. Boron is required for various physiological processes within the plants like pollen tube development, pollination and setting up of flowers and fruits. Almost all fields, oil seeds and plantation crops requires more quantities of Calcium and Boron for completion of their life cycle as well as for improving yield both by quality and quantity. Fleshy vegetables and fruits like Potato, Tomato, Brinjal, Cauliflower, Cabbage, Cucurbits, Pumpkin, Apple, Water Melon, Papaya, Mango and Banana requires more quantities of Calcium and Boron along with other nutrients.

DIRECTION FOR USE

FOR DRIP IRRIGATION: Mix 1 litre of Multiplex Chamak + in 200 litres of water & feed through drip. We recommend two to three applications during flowering and fruit development stage.

FOR FOLIAR SPRAY: Dissolve 3 ml of Multiplex Chamak + in one litre of water and spray on both the surfaces of the leaves and on fruits.

We recommend 2 to 5 sprays depending upon the crop at an interval of 15 to 20 days between sprays beginning with flower initiation. For better results mix Multiplex Maxiwet at one ml or Multiplex Nagastha-180 at 0.3 ml per litre of prepared spray solution.

Packing: Multiplex Chamak + is available in 100 ml, 250 ml, 500 ml and 1 liter packing.

BENEFITS OF MULTIPLEX CHAMAK +

- Corrects Calcium and Boron deficiency in plants immediately on spraying.
- Improves plant physical structure.
- Improves keeping quality of the harvested fruits
- Improves colour of the skin of potato, keeps curd of cauliflower bright white.
- Prevents spongy tissue disease in mango, bitter pit in apple and blossom end rot in solanaceous crops
- Improves pegging and pod formation in ground nuts
- Improves pollen tube development, pollination and setting up of flowers and fruits.
- Improves yield both by quality and quantity
