NALPAK®

नलपाक®

BIO-FERTILIZER

MULTIPLEX NALPAK is a ready to use carrier based Consortia of Bio-Fertilizers containing mixture of beneficial living Micro Organisms like Azotobacter, Phosphate and Potash Solubilizing Bacteria. These beneficial Micro Organisms are capable of fixing atmospheric nitrogen, solubilising insoluble forms of phosphorus and potassium nutrients that are fixed in the soil.

DIRECTION FOR USE: Multiplex Nalpak can be used as

SEED TREATMENT - Make a slurry by mixing 100 ml of Multiplex Nalpak in 1 litre of water and mix this slurry with seeds that are required for one acre and shade dry for 30 minutes before sowing.

SEEDLING ROOT DIP - Mix 100 ml of Multiplex Nalpak in 50 ltrs of water and dip the root of the nursery plants in the solution for about 20 to 30 minutes before transplantation.

Dip roots of the Paddy seedlings for 8 to 10 hours in this solution before transplantation.

SOIL TREATMENT - Mix 500 ml of Multiplex Nalpak in 5 litres of water and mix this solution with 100 kg of Multiplex Annapurna or decomposed farmyard manure, and keep this over night. This is incorporated in to the soil at the time of sowing or transplantation. This is sufficient for one acre of land.

DRIP IRRIGATION - Mix 500 ml of Multiplex Nalpak in 100 litres of water and apply to the field through drip irrigation / spray during morning or evening hours. Sufficient soil moisture should be ensured during spray for quick proliferation of Micro Organisms.

BENEFITS OF MULTIPLEX NALPAK:

- It fixes atmospheric nitrogen in the soil, thereby plants get nitrogen easily.
- It solubilises insoluble form of phosphorus and potash nutrients that are fixed in the soil and makes it available to plants.
- Increases the yield both by quality and quantity.

Manufactured by

MULTIPLEX BIO-TECH PVT. LTD.

No. A-420, Peenya Industrial Estate, 1st Stage, Bengaluru - 560 058.
