

RUBBER SPECIAL

MULTI MICRONUTRIENTS FERTILIZER

FOR SOIL APPLICATION

Farmers' first choice since 1974

MULTIPLEX RUBBER SPECIAL

MULTI MICRONUTRIENTS FERTILIZER

Multiplex Rubber Special is a multi-micronutrient fertilizer containing secondary nutrients (Magnesium, Calcium Sulphur) and micronutrients (Zinc, Boron, Iron, Copper, Manganese and Molybdenum) in balanced quantity to meet the nutrients requirement of Rubber crop. Most Rubber plantations are found growing in high rainfall areas resulting in leaching of nutrients from the soil. Moreover, irrespective application of only NPK fertilizers makes soil more acidic, which affects uptake of other essential secondary and micronutrients from the soil. In this scenario application of Multiplex Rubber Special periodically helps in balancing nutrients in the soil and promote healthy growth of trees and high quality latex yield.

DIRECTION FOR USE

Soil Application: Apply 150 to 200 g of Multiplex Rubber Special per plant at 5 feet away from the base of the tree in furrow (3" to 5" depth) and then cover it with the soil under moist conditions. We recommend two applications a year.

First Application: Pre monsoon (April/ May).

Second Application: Post monsoon (September/ October)

BENEFITS OF MULTIPLEX RUBBER SPECIAL

- Maintains soil fertility, acts as a continuous source of secondary and micronutrients for rubber plants
- Supplies various nutrients which are otherwise not available to the plant for its healthy growth and better yield.
- Induces disease resistance in the plants and keeps them healthy.
- It provides all secondary, micronutrients for plant growth and improves yield both by quality and quantity resulting in economic benefits.

AVAILABLE PACKING: 5 kg
