

ZINC PARAM[®]

Zinc Sulphate Monohydrate
Micronutrient Fertilizer

ZINC (as Zn) 33.00%

ज़िंक परम[®]

ज़िंक सल्फेट मानोहैड्रेट

Farmers' first choice since 1974

ZINC PARAM[®]

Zinc Sulphate Monohydrate

ज़िंक परम[®]

ज़िंक सल्फेट मानोहैड्रेट

Multiplex Zinc Param contains 33% Zinc, which is easily soluble and is in available form. Zinc is the most important micronutrient required by plants. Zinc deficiency is widespread in almost all soils across India as Zinc is almost immobile in soil and plants. Plants require Zinc for various physiological and biochemical activities that take place in the plant system. Zinc deficiency occurs both in neutral pH soils as well as in calcareous soils with higher pH. High phosphate levels often induce Zinc deficiency. Zinc deficiency can be corrected in plants not only through soil application, but also by foliar application.

DIRECTION FOR USE

Foliar Spray: Dissolve 2.5 g of Zinc Param (Powder) in one litre of water and spray on both the surfaces of the leaves. Give at least two sprays.

First spray - 30 or 35 days after sowing/ transplantation.

Second spray - 20 days after first spray.

Soil Application: Apply 4 kgs of Zinc Param (Granular) per acre for all crops at the time of sowing/ transplanting/ at the time of earthing up.

BENEFITS OF MULTIPLEX ZINC PARAM

- Cheaper in cost compared to other sources of Zinc if we consider total requirement per unit area and cost benefit ratio
- Controls physiological disorders caused by Zinc Deficiency like little leaf of apple, rosette of cotton, Iron rust / Bronzing / Kharia disease in rice
- It is required in lesser quantity and corrects the Zinc deficiency effectively as the applied zinc is not lost due to fixation
- Helps in the absorption and utilization of other nutrients applied to soil
- Improves the quality and quantity of the yield by about 20 to 30%

Available Packing: 250 g, 500 g, 1 kg & 4 kg for Foliar Spray and For Soil Application in Granular form in 2 kg & 4 kg.
